EXPERIENCE

SUBJECT MATTER EXPERT - PESU IO

Bangalore, India

Web Development SME in PESU IO

August 2025 – December 2025

- Curated and taught the Full Stack Developer Bootcamp Course at PESU I/O.
- Mentored over 60 students through the MERN stack curriculum, helping them debug issues and understand core web concepts during hands-on sessions.
- Topics covering frontend fundamentals (HTML, CSS, JavaScript) to advanced React concepts (Hooks, Context API), Tailwind CSS, and complete backend development with Node.js and MongoDB - providing full MERN stack training through a hands-on, project-based approach.

Nexus PES

Bangalore, India

Web Development Head, Technical Mentor

August 2024 - Now

- Worked on several club projects, including the Nexus PES website and the NexGen Hackathon platform. Also organized and led a web development teaching session attended by 20 participants.
- Served as a Technical Mentor for NexGen Hackathon, guiding 40+ participants on technical strategy and implementation.

Web Technologies Teaching Assistant

Bangalore, India

Web Technologies Teaching Assistant, PES University

August 2025 - December 2025

- Served as a Teaching Assistant for the Web Technologies Course at PES University, this course covered the basics of web development and the MERN stack.
- Created an extensive [Documentation Website for the MERN stack](#) for developers to learn and refer from.

Research Intern at RAPID

Bangalore, India

Research Intern at RAPID PES.

June 2025 - July 2025

- Researched about Rule-Based, Machine Learning Approaches for Rooftop Solar Suitability Mapping, in selected wards of Bangalore, India, and wrote a research paper about the topic.

PROJECTS

MedAi | Medical Record Management App

- **Technologies:** Python, FastAPI, ReactJs, TailwindCSS, Typescript, Ollama.
- Developed an AI tool to securely store and analyze user medical records with a personalized chatbot, medical history summarizations using RAG-based LLM for easy review and sharing.
- Uses a Python FastAPI based backend server with Ollama for the RAG, and a Reactjs based frontend.

Trailo | Ride Management App | [\[Live\]](#)

- **Technologies:** Linux Debian, Flutter, Next.js, Node.js, Express.js, PostgreSQL (NeonDB), Google Maps SDK, Self-hosting.
- A collaborative platform designed to simplify group ride coordination and communication for motorcyclists on their road trips, with features such as real-time location sharing, route planning, voice calls, safety alerts, image journaling and other trip organisation tools.
- Implemented the Flutter Mobile App and Website (including SEO, and optimisation). Also developed the backend server (a Nodejs and Expressjs backend server self-hosted on a Debian Linux machine).
